

FOR IMMEDIATE RELEASE

## dotFX, Inc. Announces Offline Apps

### Release v1.2 of dotFX's cloud and client software framework adds offline capability

**February 12, 2009 – REDWOOD CITY, CA** - dotFX, Inc., a Redwood City-based company developing cloud and client software solutions, today released v1.2 of its core framework, which now includes offline capabilities for cloud applications.

“During the past decade, businesses have developed online channels using the Web browser as a universal client on their customers’ desktops, along with various Software-as-a-Service (SaaS) solutions served from the cloud,” stated Pete Hartigan, President of dotFX, Inc. “With the technical convergence of the cloud and client environments, a new class of business applications is emerging.”

“Customers value the always-updated nature of a SaaS application” continued Pete Hartigan. “However, users also want access to these applications when they travel on planes or are at a location where online access is not possible. dotFX’s cloud and client framework technology fills the gap, and Release v1.2 enables companies to provision, deploy, manage and maintain applications which work both offline and online.”

Release v1.2 rounds out dotFX’s overall Internet platform of essential and powerful runtime service offerings, including click-to-run application execution, incremental installation and update, a complete security model, online and offline execution modes, and the ability to run any part of the application on any local or remote device. All of these features are available without code modification. There is no vendor tie-in, no API, and no new IDE to learn.

#### **About dotFX, Inc.**

dotFX, Inc. is a privately held software company offering a suite of cloud and client software solutions. These allow client applications to be deployed, unmodified, in the cloud, as well as offering next-generation security and functionality enhancements for existing cloud applications. Founded in 2007, dotFX is headquartered in Redwood City, CA. For more information, please visit [www.dotFX.com](http://www.dotFX.com).
